REGRESSION ANALYSIS

TABLE 2. Results of the Poisson PGLM

	<i>Dependent variable:</i>		
	Number killed per capita		
	(1)	(2)	(3)
log (income pc)	-0.255*** (0.018)	-0.279*** (0.019)	-0.276*** (0.019)
Incidents pc	0.054*** (0.001)	0.016* (0.009)	0.014 (0.008)
log(income pc) × incidents pc		0.004*** (0.001)	0.004*** (0.001)
Country's population			-0.003*** (0.0004)
Constant	-3.062 (2.547)	-2.860 (2.547)	-2.803 (2.547)
Yearly effects	Yes	Yes	Yes
<i>Note:</i>		*p<0.1; **p<0.05; ***p<0.01	

RESULTS

Income per-capita is robustly related to *fatalities per-capita*
fiscal capacity of the state matters

Incidents per-capita is weakly related to *fatalities per-capita*
... *fractionalisation and polarisation relevant determinants of*
incident per-capita

Significant increase in *fatalities per-capita* since the end of Cold War

Marginally higher *fatalities per-capita* due to *incidents per-capita* in
richer countries

Marginally lower *fatalities per-capita* in larger countries
